SUMMARY

Computer Science and Data Science undergraduate pursuing a dual degree in Information Technology (B.Tech) and Artificial Intelligence (B.Sc.), with hands-on experience building full-stack and machine learning applications end to end. Proficient in Python, JavaScript/React, REST API development, and applied ML pipelines, with proven ability to integrate AI and LLM APIs (Gemini API) into production-style systems. Strong foundation in data structures, algorithms, and exploratory data analysis, seeking a Software Engineering or Data Science internship.

EDUCATION

Indian Institute of Technology (IIT) Guwahati CGPA: 8.50/10 (Semester 2) 7.50/10 (Semester 1)	<i>Expected 2029</i>
Guru Tegh Bahadur Institute of Technology CGPA: 8.76/10	<i>Expected 2029</i>
CBSE, Class XII	<i>Completed</i>

TECHNICAL SKILLS

Languages: Python, JavaScript, C, SQL
Web Development: React, Next.js, REST APIs, FastAPI, Flask, Tailwind CSS, React Three Fiber
Machine Learning: Regression, Classification, Clustering, Dimensionality Reduction, Isolation Forest, Feature Engineering, Model Deployment
Data Science: Pandas, NumPy, Scikit-learn, Exploratory Data Analysis (EDA), Data Visualization, SHAP (Explainable AI)
Databases & Backend: Firebase, Firestore, Supabase, NetworkX
Tools & Concepts: Git/GitHub, Gemini API, Data Structures & Algorithms (DSA), Version Control

KEY PROJECTS

Fraud-Detector Engine	<i>Python (FastAPI, NetworkX, SHAP), Next.js, Tailwind CSS, Gemini API</i>
- Engineered a real-time, graph-based fraud detection engine applying anomaly detection and behavioral data analysis to flag suspicious activity. - Integrated the Gemini API to generate natural language explanations for flagged fraud cases, improving interpretability of model outputs. - Built a responsive full-stack interface using Next.js and Tailwind CSS to visualize explainable anomaly detection results.	
Payout-App — Startup-Investor Platform	<i>Next.js, Tailwind CSS, Firebase, Python, Flask</i>
- Designed and built a secure fintech platform connecting startups and investors through milestone-based payments and fraud prevention. - Implemented an escrow payment system using Firestore logic to programmatically hold and release funds based on milestone completion. - Developed a Python/Flask microservice deploying an Isolation Forest model for AI-driven fraud detection on transactions.	
Stellaris — 3D Interactive Star Map	<i>Next.js, React Three Fiber, Three.js</i>
- Built an interactive 3D star map and constellation visualizer for exploring celestial bodies in the browser. - Implemented 2D canvas pattern-matching logic to recognize and label all 88 IAU-recognized constellations. - Designed immersive 3D navigation controls to support real-time exploration of celestial objects.	
Macros Analyzer	<i>Python, Gemini API, Firebase</i>
- Built an AI-powered nutrition tracking application that estimates food macronutrients from user-uploaded photos. - Integrated the Gemini API for image recognition and nutrient estimation, automating food logging. - Implemented real-time data storage and user authentication using Firebase.	
Loan Approval Prediction	<i>Python, Scikit-learn, Pandas</i>
- Built a supervised machine learning pipeline to predict loan eligibility from applicant demographic and financial data. - Performed data cleaning, missing-value imputation, and feature engineering to improve model input quality. - Achieved 82.29% prediction accuracy using Logistic Regression.	

ACHIEVEMENTS & EXTRACURRICULARS

- Participant in Capture The Flag (CTF) cybersecurity challenges hosted at Delhi Technological University (DTU).
